Microbial Life

Is the soil you're planting in dead or alive?

Are you just growing a plant?

Is it healthy? Nutrient Dense?

EarthBrew microbial life will *Transform the soil and Transport* the perfect nutrients from the soil to the plant root. This creates the most environmentally desired soil system that will sustain itself and create superior growth for generations to come.

- Reintroducing or adding EarthBrew microbial life back into your soil will recreate the perfect natural soil system Mother Nature had originally intended.
- Our products are personally produced on our family farm. We brew good old fashioned low tech, high quality compost tea, extracts and charged char to apply to both your soil and plants.
- Through the art of controlled natural composting (both Thermo and Vermi (worm) composting) EarthBrew is growing and brewing the very best beneficial microbial life for your soil and plants. (Microscope Verified)
- EarthBrew microbial life benefit in the natural process of plant *growth*, plant *health* and produce high quality, good for your body food, feed and/or seed.
- ***There is absolutely no technology as Advanced as Mother Nature, But EarthBrew is close.***

 **RECHARGING YOUR SOIL**

 **Offering: Compost, Teas, Extracts and Charged Char**

 **MICROSCOPY VERIFIED**

 **Improving: Soil Health, Water Quality & Conservation**
